DIAZEPAM ADMINISTRATION INSTRUCTIONS

INTRANASAL ADMINISTRATION

1

Twist the syringe tip onto the vial adaptor.

2

Draw up labeled dose.

3

Untwist the syringe from the vial adaptor and twist the intranasal adaptor on the syringe tip.

4

Press the nasal adaptor against your dog's nostril and express contents into the nasal cavity by depressing syringe plunger.

What To Expect: Your pet may experience some side effects after receiving Diazepam. Side effects may include sedation, delirium, incoordination and vocalization up to several hours after administration. The symptoms are also possible side effects of the seizure itself and usually resolve within a few hours.

RECTAL ADMINISTRATION

1

Twist the syringe tip onto the vial adaptor.

2

Draw up labeled dose.

3

Untwist the syringe from the vial adaptor and twist the cannula onto the syringe tip.

4

If needed, apply lubricant to the cannula to ease insertion into the rectum.

5

Administer medication by inserting lubricated cannula into the rectum as far as comfortable (1-2 inches) and depress syringe plunger.
